RE: EverComp 26.1 FRP Composite Sheet Pile Grade Control Structures 2&3  
North Star High School Project/Wetland Restoration Project  
City of Lincoln Project Number 240314  
5801 North 33<sup>rd</sup> Street  
Lincoln, NE

Dear Mr. Hazenberg:

I represent the City in the Watershed Department responsible for the above referenced project.

When the contractor was unable to procure the originally specified sheet pile material, they asked EA Engineering, Science, and Technology to evaluate your EverComp 26.1 FRP composite sheet pile material for the project. They in turn asked that Everlast Synthetic Products (ESP) evaluate the design and provide signed and sealed calculations confirming the structural adequacy of the sheets. ESP did so and had sheets on site within a week, which was key with keeping the project on schedule.

The design considered two grade separation control structures with 20 feet long sheets cantilevered into very soft alluvial soils under a full saturated hydraulic head.

To date the sheets are performing as intended and we would utilize the material again on future projects where appropriate.

Sincerely,

Ed Kouma
