About Vinyl Seawalls and Retaining Walls at Your Course

As a proud member of the GCSAA Everlast is working with both Golf Course Superintendents and Architects to design and retrofit golf courses that require long term solutions for seawalls, bulkheads, and retaining walls.

If you'd like to learn more about adding an Everlast Vinyl lakewall or seawall to your golf course, **Call us at 1-800-687-0036 for a FREE ESTIMATE!**

We will walk you through the entire process from features, benefits, costs - both short term and long term - and suggest local contractors to help with the install.

Everlast Synthetic Products

1000 Wyngate Parkway, Suite 100
Woodstock, GA 30189

800-687-0036

- Improves mowing and maintenance times for crews
- Replaces rotting wood and failing railroad tie walls
- Chosen by World Class country clubs and municipal courses alike
- 50 year product warranty
- Proudly made in the USA

Golf Course Vinyl Seawalls

Improve Course Aesthetics & Save on Maintenance with Golf Course Lakewalls

everlastseawalls.com

everlastseawalls.com

Everlast designs and manufactures golf course lakewalls that vastly limit erosion, look attractive, and require minimal maintenance.

Long-Lasting Erosion Control

Golf course seawalls and lakewalls contribute to the long-term value and life of a golf course. Unlike pressure-treated wood that rots, steel that corrodes, or concrete that crumbles, Everlast vinyl sheet piling is a permanent solution requiring little to no maintenance.

Everlast walls create a clean, attractive, permanent barrier between land and water. Once installed, even the harshest environmental conditions like heavy storms and flooding have a hard time undermining the walls.

Attractive & Feature-Filled

Everlast Vinyl golf course lakewalls have a clean look, and we offer color choices and synthetic cap options to match the surrounding landscape. If the wall ever gets dirty, it can easily be pressure washed to look like new again.

Everlast Vinyl Seawalls are perfectly suited for Island Greens, retaining walls, retention/detention ponds, channel linings and marsh/wetland barriers at golf courses. The product is made from recycled products and does not leach any harmful chemicals into the environment. The sheets are UV stabilized, quality control tested, and proven to last...all while looking great!

Affordable & Minimally Disruptive

We've designed our vinyl sheet piling to accommodate golf course superintendents and their budgets. Golf course lakewalls are often overlooked because of fear of the cost. However, after evaluating the long term costs, maintenance savings, and aesthetic benefits, the value speaks for itself.

In many northern climates, installs can be done during the winter months, so construction will have little to no impact on playability. In other cases, the work can be done in conjunction with normal play or in some cases with temporary tee boxes/greens. Crews are able to work quickly and normally have work completed within a very short time.

Course members are really excited about how great the lakewall looks. I'm thrilled because my mowing crew can now edge right up to the wall without having to worry about falling into the water!
